

Proactive not Reactive; Preventative not Remedial

It anticipates and prevents privacy invasive events before they happen.

Whether applied to information technologies, organizational practices, physical design, or networked information ecosystems.
For example, preventing internal data breaches.

Privacy as the Default

Privacy by Design seeks to deliver the maximum degree of privacy by ensuring that personal data are automatically protected in any given IT system or business practice.

If an individual does nothing, their privacy still remains intact. No action is required on the part of the individual to protect their privacy – it is built into the system, by default.

Privacy Embedded into Design

Privacy by Design is embedded into the design and architecture of IT systems and business practices.

The result is that privacy becomes an essential component of the core functionality being delivered.

Privacy is integral to the system, without diminishing functionality

Full Functionality – Positive-Sum, not Zero-Sum

Privacy by Design seeks to accommodate all legitimate interests and objectives in a positive-sum “win-win” manner, not through a dated, zero-sum approach, where unnecessary trade-offs are made.

Privacy by Design avoids the pretence of false dichotomies, such as privacy vs. security, demonstrating that it is possible, and far more desirable, to have both.

My My Phone

★☆☆☆☆ 09/01/2020

After updating to version 2.5.0 McAfee anti-virus system identified KBZPay as malware. It might tarnish your reputation. A banking system should be completely trusted by customers. Please be honest with the users. You are currently using Huawei's technology for the app. I would not recommend to do so because Google and other tech companies do not recognize Huawei as their trusted partner. Please fix the problem ASAP.

End-to-End Security – Lifecycle Protection

Privacy by Design, having been embedded into the system prior to the first element of information being collected, extends securely throughout the entire lifecycle of the data involved – strong security measures are essential to privacy, from start to finish.

Visibility and Transparency

Privacy by Design seeks to assure all stakeholders that whatever the business practice or technology involved, it is in fact, operating according to the stated promises and objectives, subject to independent verification.

Its component parts and operations remain visible and transparent, to both users and providers alike.

Remember, trust but verify!

Respect for User Privacy

Above all, Privacy by Design requires architects and operators to keep the interests of the individual uppermost by offering such measures as strong privacy defaults, appropriate notice, and empowering user-friendly options. Keep it user-centric!
